In 2015, the City began a three-phased Citywide storm water program. The first phase was the Citywide storm water needs assessment which involved identifying storm water problems and stream health throughout the City.

Since that time, Phase II has been completed which consists of the development of the draft Storm Water Master plan.

These three open houses will present this Master Plan to the public including concept engineering solutions for storm water problems with the highest statistical needs.

-Meet with engineers from HR Green regarding the draft Storm Water Master Plan.

-View Maps showing proposed project solutions identified throughout the City and within your area.

-Provide feedback about the proposed solutions and learn about the next steps.
